Module Documentation

3.1 ECUAL layer

Modules

- · Button driver
- LED driver

3.1.1 Detailed Description

This layer contains all the drivers for the external devices that connected to the MCU.

3.2 Button driver

Functions

- EN_pinErro_t buttonInit (EN_pinNum_t buttonPin) initialize the button pin.
- EN_pinErro_t buttonRead (EN_pinNum_t buttonPin, EN_pinState_t *pinState) reads the value of the button.

3.2.1 Detailed Description

This driver contains all the function that controls the buttons connected to the MCU.

3.2.2 Function Documentation

3.2.2.1 buttonInit()

initialize the button pin.

buttonInit function:

• This function makes the button pin as Input.

Parameters

in	buttonPin	it is the pin which the button is connected to,it may be (PA0 to PD7	
out	none	no output arguments	

Return values

WRONG_PIN_NUM	if the pinNum is wrong.
OK	if the pinNum is correct.

Definition at line 11 of file Button.c.

3.2.2.2 buttonRead()

reads the value of the button.

buttonRead function:

- It reads the value of the connected pin to the button.
- It store the value in the pinState pointer.

Parameters

in	buttonPin	it is the pin which the button is connected to,it may be (PA0 to PD7).
out	pinState	the function store the value of the button in that pointer.

Return values

WRONG_PIN_NUM	if the pinNum is wrong.	
OK	if the pinNum is correct.	

Definition at line 16 of file Button.c.

3.3 LED driver

Functions

• EN_pinErro_t ledInit (EN_pinNum_t ledPin)

3.3 LED driver 7

```
initialize the led pin.
```

• EN_pinErro_t ledOn (EN_pinNum_t ledPin)

turn the led on.

• EN_pinErro_t ledOff (EN_pinNum_t ledPin)

turn the led off.

• EN_pinNum_t ledToggle (EN_pinNum_t ledPin)

toggle the led state.

3.3.1 Detailed Description

This driver contains all the function that controls the LEDs connected to the MCU.

3.3.2 Function Documentation

3.3.2.1 ledlnit()

initialize the led pin.

ledInit function:

• This function initialize the led pin as output.

Parameters

in	ledPin	it is the pin which the led is connected to,it may be (PA0 to PD7).
out	none	no output arguments

Return values

WRONG_PIN_NUM	if the pinNum is wrong.
OK	if the pinNum is correct.

Definition at line 10 of file LED.c.

3.3.2.2 ledOff()

turn the led off.

ledOff function:

• This function turns the led off by writing low to the pin.

Parameters

	in	ledPin	it is the pin which the led is connected to,it may be (PA0 to PD7).
Ī	out	none	no output arguments

Return values

WRONG_PIN_NUM	if the pinNum is wrong.
OK	if the pinNum is correct.

Definition at line 20 of file LED.c.

3.3.2.3 ledOn()

turn the led on.

ledOn function:

• This function turns the led on by writing high to the pin.

Parameters

in	ledPin	it is the pin which the led is connected to,it may be (PA0 to PD7).
out	none	no output arguments

Return values

	WRONG_PIN_NUM	if the pinNum is wrong.		
ſ	OK	if the pinNum is correct.		

Definition at line 15 of file LED.c.

3.3.2.4 ledToggle()

```
EN_pinNum_t ledToggle (
```

3.4 MCAL layer 9

```
EN_pinNum_t ledPin )
```

toggle the led state.

ledToggle function:

- · This function toggle the led state.
- · It makes the led on if the led was off.
- · It makes the led off if the led was on.

Parameters

in	ledPin	it is the pin which the led is connected to,it may be (PA0 to PD7).
out	none	no output arguments

Return values

WRONG_PIN_NUM	if the pinNum is wrong.
OK	if the pinNum is correct.

Definition at line 25 of file LED.c.

3.4 MCAL layer

Modules

- DIO driver
- · Interrupts driver

3.4.1 Detailed Description

This layer contains all the driver related to the MCU.

3.5 DIO driver

Functions

- EN_pinErro_t DIO_pinInit (EN_pinNum_t pinNum, EN_pinDirection_t pinDirection)

 Set the direction of the pin.
- EN_pinErro_t DIO_pinWrite (EN_pinNum_t pinNum, EN_pinState_t pinState)

This function writes High or Low on the pin.

• EN_pinErro_t DIO_pinToggle (EN_pinNum_t pinNum)

This function toggles the state of the pin.

• EN_pinErro_t DIO_pinRead (EN_pinNum_t pinNum, EN_pinState_t *pinState)

This function reads the state of the pin.

3.5.1 Detailed Description

This contains all the function needed to configure and manipulate the MCU ports.

3.5.2 Function Documentation

3.5.2.1 DIO_pinInit()

Set the direction of the pin.

DIO_pinInit

- · This function makes pin input or output.
- it makes the pinNum Output by setting the pinNum in the DDRx (x:A,B,C or D) register.
- it makes the pinNum Input by clearing the pinNum in the DDRx (x:A,B,C or D) register.

Parameters

in	pinNum	it represent the pin number (PA0 to PD7).
in	pinDirection	it represent the pin direction it may be (Input or Output).
out	none	no output arguments

Return values

WRONG_PIN_NUM	if the pinNum is wrong.
WRONG_PIN_DIR	if the pinDirection is wrong.
OK	if the pinNum and the pinDirection are correct.

Definition at line 12 of file DIO.c.

3.5.2.2 DIO_pinRead()

This function reads the state of the pin.

DIO_pinRead

• It reads the bit relative to the pinNum in the register PINx (A,B,C or D).

3.5 DIO driver

Parameters

	in	pinNum	it represent the pin number (PA0 to PD7).
ſ	out	pinState	this is a pointer to store the state of the pin (High or Low).

Return values

WRONG_PIN_NUM	if the pinNum is wrong.
OK	if the pinNum is correct.

Definition at line 166 of file DIO.c.

3.5.2.3 DIO_pinToggle()

This function toggles the state of the pin.

DIO_pinToggle

- if the current state of the pin is High it will make it Low.
- if the current state of the pin is Low it will make it High.

Parameters

in	pinNum	it represent the pin number (PA0 to PD7).
out	none	no output arguments

Return values

WRONG_PIN_NUM	if the pinNum is wrong.
OK	if the pinNum is correct.

Definition at line 198 of file DIO.c.

3.5.2.4 DIO_pinWrite()

This function writes High or Low on the pin.

DIO_pinWrite

- it writes High to the pinNum by setting the pinNum in the PORTx (x:A,B,C or D) register.
- it writes Low to the pinNum by clearing the pinNum in the PORTx (x:A,B,C or D) register.

Parameters

in	pinNum	it represent the pin number (PA0 to PD7).
in	pinState	it represent the pin state it may be (High or Low).
out	none	no output arguments

Return values

WRONG_PIN_NUM	if the pinNum is wrong.
WRONG_PIN_STATE	if the pinState is wrong.
OK	if the pinNum and the pinState are correct.

Definition at line 90 of file DIO.c.

3.6 ATMEGA32 external interrupts driver

External interrupts driver.

Enumerations

enum EN_interruptNum_t { INT2 = 5 , INT0 , INT1 }

External interrupt number.

• enum EN_interruptSenseControl_t { LOW_LEVEL , ANY_LOGICAL_CHANGE , FALLING_EDGE , RISING_EDGE }

External interrupt sense control.

enum EN_interruptError_t { INT_OK, WRONG_INT_NUM, WRONG_SENSE_CONTROL }
 External interrupt errors.

Functions

EN_interruptError_t Ext_interruptInit (EN_interruptNum_t interruptNum, EN_interruptSenseControl_t interruptSenseControl)

External interrupt init.

External interrupts pins

- · These are the pins which connected to each interrupt.
- It should be configured as Input.
- #define INT0 PIN (PD2 PORTD OFFSET)
- #define INT1_PIN (PD3 PORTD_OFFSET)
- #define INT2_PIN (PB2 PORTB_OFFSET)

INTO sense control

• These two bits ISC00 and ISC01 which located in MCUCR register control the INT0 sense control.

ISC01	ISC00	Description
0	0	The low level of INT0 generates an interrupt request.
0	1	Any logical change on INT0 generates an interrupt request.
1	0	The falling edge of INT0 generates an interrupt request.
1	1	The rising edge of INT0 generates an interrupt request.

•

- #define ISC00 0
- #define ISC01 1

INT1 sense control

• These two bits ISC10 and ISC11 which located in MCUCR register control the INT1 sense control.

ISC11	ISC10	Description
0	0	The low level of INT1 generates an interrupt request.
0	1	Any logical change on INT1 generates an interrupt request.
1	0	The falling edge of INT1 generates an interrupt request.
1	1	The rising edge of INT1 generates an interrupt request.

.

- #define ISC10 2
- #define ISC11 3

INT2 sense control

• This bit ISC2 which located in MCUCSR register control the INT2 sense control.

ISC2	Description
0	The falling edge on INT2 activates the interrupt request.
1	The rising edge on INT2 activates the interrupt request.

•

• #define ISC2 6

3.6.1 Detailed Description

External interrupts driver.

3.6.2 Macro Definition Documentation

3.6.2.1 INTO_PIN

```
#define INTO_PIN (PD2 - PORTD_OFFSET)
```

This Pin connected to INT0 interrupt

Definition at line 29 of file Ext interrupt.h.

3.6.2.2 INT1_PIN

```
#define INT1_PIN (PD3 - PORTD_OFFSET)
```

This Pin connected to INT1 interrupt

Definition at line 30 of file Ext interrupt.h.

3.6.2.3 INT2_PIN

```
#define INT2_PIN (PB2 - PORTB_OFFSET)
```

This Pin connected to INT2 interrupt

Definition at line 31 of file Ext interrupt.h.

3.6.2.4 ISC00

```
#define ISC00 0
```

Interrupt Sense Control 0 Bit 0

Definition at line 47 of file Ext interrupt.h.

3.6.2.5 ISC01

```
#define ISC01 1
```

Interrupt Sense Control 0 Bit 1

Definition at line 48 of file Ext interrupt.h.

3.6.2.6 ISC10

#define ISC10 2

Interrupt Sense Control 1 Bit 0

Definition at line 65 of file Ext interrupt.h.

3.6.2.7 ISC11

#define ISC11 3

Interrupt Sense Control 1 Bit 1

Definition at line 66 of file Ext interrupt.h.

3.6.2.8 ISC2

#define ISC2 6

Interrupt Sense Control 2 Bit 6

Definition at line 81 of file Ext interrupt.h.

3.6.3 Enumeration Type Documentation

3.6.3.1 EN_interruptError_t

enum EN_interruptError_t

External interrupt errors.

• This enum contains the values for interrupt errors.

Enumerator

INT_OK	enum value shows that INTx parameters is right.
WRONG_INT_NUM	enum value shows that INTx number is wrong.
WRONG_SENSE_CONTROL	enum value shows that INTx sense control is wrong.

Definition at line 120 of file Ext interrupt.h.

3.6.3.2 EN_interruptNum_t

enum EN_interruptNum_t

External interrupt number.

- This enum contains the bit number for each interrupt in GICR register.
- · Setting these bits will enables the interrupts.
- Clearing these bits will disables the interrupts.

Enumerator

INT2	enum value for external interrupt 2
INT0	enum value for external interrupt 0
INT1	enum value for external interrupt 1

Definition at line 92 of file Ext interrupt.h.

3.6.3.3 EN_interruptSenseControl_t

enum EN_interruptSenseControl_t

External interrupt sense control.

- This enum contains the values for interrupt sense control.
- each value represent the exact value that should be written in the MCUCR register this for INT0 and INT1 and MCUCSR register for INT2.

Note

INT2 has just rising and falling edge sense control.

Enumerator

LOW_LEVEL	The low level generates an interrupt request.
ANY_LOGICAL_CHANGE	Any logical change generates an interrupt request.
FALLING_EDGE	The falling edge generates an interrupt request
RISING_EDGE	The rising edge generates an interrupt request

3.7 Interrupts driver

Definition at line 107 of file Ext interrupt.h.

3.6.4 Function Documentation

3.6.4.1 Ext_interruptInit()

External interrupt init.

- This function configures INTx sense control.
- This function enables INTx.

Parameters

	in	interruptNum	This is the interrupt number that needed to be enabled.
Ī	in	interruptSenseControl	This is the value of the interrupt sense control which the interrupt will
			activated at it.

Return values

INT_OK	If interruptNum and interruptSenseControl are corrects.
WRONG_INT_NUM	If interruptNum is wrong.
WRONG_SENSE_CONTROL	If interruptSenseControl is wrong.

Definition at line 9 of file Ext interrupt.c.

3.7 Interrupts driver

Modules

• ATMEGA32 external interrupts driver

External interrupts driver.

• ATMEGA32 interrupts definitions

Interrupts request handlers.

3.7.1 Detailed Description

3.8 ATMEGA32 interrupts definitions

Interrupts request handlers.

Macros

```
• #define sei() __asm__ _volatile__ ("sei" ::: "memory")
#define cli() __asm__ _volatile__ ("cli" ::: "memory")

    #define EXT_INT0 __vector_1

• #define EXT INT1 vector 2
• #define EXT_INT2 __vector_3
• #define TIM2_COMP __vector_4
• #define TIM2_OVF __vector_5

    #define TIM1 CAPT vector 6

    #define TIM1_COMPA __vector_7

• #define TIM1_COMPB __vector_8
• #define TIM1_OVF __vector_9
• #define TIM0 COMP vector 10
• #define TIM0_OVF __vector_11

    #define SPI_STC __vector_12

    #define USART_RXC __vector_13

    #define USART_UDRE __vector_14

• #define USART_TXC __vector_15
• #define ADC vector 16
• #define EE_RDY __vector_17
• #define ANA_COMP __vector_18
• #define TWI __vector_19

    #define SPM_RDY __vector_20

    #define ISR(INT_VECT)

     interrupt service routine Macro.
```

3.8.1 Detailed Description

Interrupts request handlers.

This section contains:

- · Macros for Interrupts request handlers in ATmega32.
- · Macros for enabling and disabling global interrupt.
- ISR Macro which defines interrupt service routine function.

3.8.2 Macro Definition Documentation

3.8.2.1 ADC

```
#define ADC __vector_16
```

This Macro defines ADC Conversion Complete Handler

Definition at line 63 of file Interrupt.h.

3.8.2.2 ANA_COMP

```
#define ANA_COMP __vector_18
```

This Macro defines Analog Comparator Handler

Definition at line 65 of file Interrupt.h.

3.8.2.3 cli

```
#define cli() __asm__ __volatile__ ("cli" ::: "memory")
```

- · Disables all interrupts by clearing the global interrupt mask.
- · This function actually compiles into a single line of assembly, so there is no function call overhead.
- However, the macro also implies a *memory barrier* which can cause additional loss of optimization.

Definition at line 46 of file Interrupt.h.

3.8.2.4 EE_RDY

```
#define EE_RDY __vector_17
```

This Macro defines EEPROM Ready Handler

Definition at line 64 of file Interrupt.h.

3.8.2.5 EXT_INT0

```
#define EXT_INT0 __vector_1
```

This Macro defines IRQ0 Handler

Definition at line 48 of file Interrupt.h.

3.8.2.6 EXT_INT1

```
#define EXT_INT1 __vector_2
```

This Macro defines IRQ1 Handler

Definition at line 49 of file Interrupt.h.

3.8.2.7 EXT_INT2

```
#define EXT_INT2 __vector_3
```

This Macro defines IRQ2 Handler

Definition at line 50 of file Interrupt.h.

3.8.2.8 ISR

void INT_VECT(void)

interrupt service routine Macro.

• Introduces an interrupt handler function (interrupt service routine) that runs with global interrupts initially disabled by default with no attributes specified.

Precondition

vector must be one of the interrupt vector names that are valid for the particular MCU type.

void INT_VECT(void) __attribute__((signal, used));\

Definition at line 78 of file Interrupt.h.

3.8.2.9 sei

```
#define sei() __asm__ _volatile__ ("sei" ::: "memory")
```

- Disables all interrupts by clearing the global interrupt mask.
- This function actually compiles into a single line of assembly, so there is no function call overhead.
- However, the macro also implies a *memory barrier* which can cause additional loss of optimization.

Definition at line 35 of file Interrupt.h.

3.8.2.10 SPI_STC

```
#define SPI_STC __vector_12
```

This Macro defines SPI Transfer Complete Handler

Definition at line 59 of file Interrupt.h.

3.8.2.11 SPM_RDY

```
#define SPM_RDY __vector_20
```

This Macro defines Store Program Memory Ready Handler

Definition at line 67 of file Interrupt.h.

3.8.2.12 TIM0_COMP

```
#define TIM0_COMP __vector_10
```

This Macro defines Timer0 Compare Handler

Definition at line 57 of file Interrupt.h.

3.8.2.13 TIM0_OVF

```
#define TIM0_OVF __vector_11
```

This Macro defines Timer0 Overflow Handler

Definition at line 58 of file Interrupt.h.

3.8.2.14 TIM1_CAPT

```
#define TIM1_CAPT __vector_6
```

This Macro defines Timer1 Capture Handler

Definition at line 53 of file Interrupt.h.

3.8.2.15 TIM1_COMPA

```
#define TIM1_COMPA __vector_7
```

This Macro defines Timer1 CompareA Handler

Definition at line 54 of file Interrupt.h.

3.8.2.16 TIM1_COMPB

```
#define TIM1_COMPB __vector_8
```

This Macro defines Timer1 CompareB Handler

Definition at line 55 of file Interrupt.h.

3.8.2.17 TIM1_OVF

```
#define TIM1_OVF __vector_9
```

This Macro defines Timer1 Overflow Handler

Definition at line 56 of file Interrupt.h.

3.8.2.18 TIM2_COMP

```
#define TIM2_COMP __vector_4
```

This Macro defines Timer2 Compare Handler

Definition at line 51 of file Interrupt.h.

3.8.2.19 TIM2_OVF

```
#define TIM2_OVF __vector_5
```

This Macro defines Timer2 Overflow Handler

Definition at line 52 of file Interrupt.h.

3.9 MCU ports

3.8.2.20 TWI

```
#define TWI __vector_19
```

This Macro defines Two-wire Serial Interface Handler

Definition at line 66 of file Interrupt.h.

3.8.2.21 USART_RXC

```
#define USART_RXC __vector_13
```

This Macro defines USART RX Complete Handler

Definition at line 60 of file Interrupt.h.

3.8.2.22 USART_TXC

```
#define USART_TXC __vector_15
```

This Macro defines USART TX Complete Handler

Definition at line 62 of file Interrupt.h.

3.8.2.23 **USART_UDRE**

```
#define USART_UDRE __vector_14
```

This Macro defines UDR Empty Handler

Definition at line 61 of file Interrupt.h.

3.9 MCU ports

Macros

- #define PORTA OFFSET 0
- #define PORTB_OFFSET 8
- #define PORTC_OFFSET 16
- #define PORTD_OFFSET 24

Enumerations

```
enum EN_pinNum_t {
    PA0 , PA1 , PA2 , PA3 ,
    PA4 , PA5 , PA6 , PA7 ,
    PB0 , PB1 , PB2 , PB3 ,
    PB4 , PB5 , PB6 , PB7 ,
    PC0 , PC1 , PC2 , PC3 ,
    PC4 , PC5 , PC6 , PC7 ,
    PD0 , PD1 , PD2 , PD3 ,
    PD4 , PD5 , PD6 , PD7 }

enum EN_pinState_t { Low , High }

enum EN_pinDirection_t { Input , Output }

enum EN_pinErro_t { OK , WRONG_PIN_NUM , WRONG_PIN_DIR , WRONG_PIN_STATE }
```

3.9.1 Detailed Description

This contains all the definition for MCU pins, input and output pins values and pins errors.

3.9.2 Macro Definition Documentation

3.9.2.1 PORTA_OFFSET

```
#define PORTA_OFFSET 0
```

This macro defines the start of the PORTA pins

Definition at line 62 of file ATmega32Port.h.

3.9.2.2 PORTB_OFFSET

```
#define PORTB_OFFSET 8
```

This macro defines the start of the PORTB pins

Definition at line 63 of file ATmega32Port.h.

3.9.2.3 PORTC_OFFSET

```
#define PORTC_OFFSET 16
```

This macro defines the start of the PORTC pins

Definition at line 64 of file ATmega32Port.h.

3.9 MCU ports 25

3.9.2.4 PORTD_OFFSET

```
#define PORTD_OFFSET 24
```

This macro defines the start of the PORTD pins

Definition at line 65 of file ATmega32Port.h.

3.9.3 Enumeration Type Documentation

3.9.3.1 EN_pinDirection_t

```
enum EN_pinDirection_t
```

Enumerator

Input	enum value for input direction
Output	enum value for output direction

Definition at line 72 of file ATmega32Port.h.

3.9.3.2 EN_pinErro_t

enum EN_pinErro_t

Enumerator

OK	enum value that defines that the pin parameters are ok
WRONG_PIN_NUM	enum value that defines that the pin number is wrong
WRONG_PIN_DIR	enum value that defines that the pin direction is wrong
WRONG_PIN_STATE	enum value that defines that the pin state is wrong

Definition at line 77 of file ATmega32Port.h.

3.9.3.3 EN_pinNum_t

enum EN_pinNum_t

This enum contains the value for all pins of the MCU of the four ports (PORTA,PORTB,PORTC,PORTD)

Enumerator

PA0	enum value for PORTA pin 0
PA1	enum value for PORTA pin 1
PA2	enum value for PORTA pin 2
PA3	enum value for PORTA pin 3
PA4	enum value for PORTA pin 4
PA5	enum value for PORTA pin 5
PA6	enum value for PORTA pin 6
PA7	enum value for PORTA pin 7
PB0	enum value for PORTB pin 0
PB1	enum value for PORTB pin 1
PB2	enum value for PORTB pin 2
PB3	enum value for PORTB pin 3
PB4	enum value for PORTB pin 4
PB5	enum value for PORTB pin 5
PB6	enum value for PORTB pin 6
PB7	enum value for PORTB pin 7
PC0	enum value for PORTC pin 0
PC1	enum value for PORTC pin 1
PC2	enum value for PORTC pin 2
PC3	enum value for PORTC pin 3
PC4	enum value for PORTC pin 4
PC5	enum value for PORTC pin 5
PC6	enum value for PORTC pin 6
PC7	enum value for PORTC pin 7
PD0	enum value for PORTD pin 0
PD1	enum value for PORTD pin 1
PD2	enum value for PORTD pin 2
PD3	enum value for PORTD pin 3
PD4	enum value for PORTD pin 4
PD5	enum value for PORTD pin 5
PD6	enum value for PORTD pin 6
PD7	enum value for PORTD pin 7

Definition at line 22 of file ATmega32Port.h.

3.9.3.4 EN_pinState_t

enum EN_pinState_t

Enumerator

Low	enum value for Low output
High	enum value for high output

3.10 Bit math 27

Definition at line 67 of file ATmega32Port.h.

3.10 Bit math

Macros

#define setBit(reg, bitNum) reg |= (1<<bitNum)

this Macro writes 1 to the bit.

• #define clrBit(reg, bitNum) reg &= (\sim (1<<bitNum))

this Macro clear the bit.

#define toggleBit(reg, bitNum) reg ^= (1<<bitNum)

This Macro toggle the bit logic.

#define getBit(reg, bitNum) ((reg>>bitNum) & 0x01)

This Macro read this bit value.

3.10.1 Detailed Description

Author: Ehab Omara

Date: 8/10/2022 12:46:40 PM

File name: BitMath.h

This contains all the bit math macros that manipulates the registers values.

3.10.2 Macro Definition Documentation

3.10.2.1 clrBit

```
#define clrBit( reg, \\ bitNum \ ) \ reg \ \&= \ (\sim (1 << bitNum))
```

this Macro clear the bit.

clrBit function

- this function takes register (reg) and bit number (bitNum).
- it make the required bit in the register Low(0).

Parameters

in	reg	this is register that needed to be changed.
in	bitNum	this is bit number that needed to be written to 0 in the register.

Definition at line 37 of file BitMath.h.

3.10.2.2 getBit

This Macro read this bit value.

getBit function

- this function takes register (reg) and bit number (bitNum).
- it returns the state of the required bit in the register.
- if the required bit is Low(0) it will return 0.
- if the required bit is High(1) it will return 1.

Parameters

in	reg	This is register where it reads the value from it.
in	bitNum	This is the bit number that needed to be read.

Definition at line 62 of file BitMath.h.

3.10.2.3 setBit

```
#define setBit(
                reg,
                bitNum ) reg |= (1<<bitNum)</pre>
```

this Macro writes 1 to the bit.

setBit function

- this function takes register (reg) and bit number (bitNum).
- it make the required bit in the register High(1).

Parameters

in	reg	this is register that needed to be changed.
in	bitNum	this is bit number that needed to be written to 1 in the register.

Definition at line 26 of file BitMath.h.

3.10.2.4 toggleBit

```
#define toggleBit( reg, \\ bitNum \ ) \ reg \ ^= \ (1 << bitNum)
```

This Macro toggle the bit logic.

#togBit function

- this function takes register (reg) and bit number (bitNum).
- it toggle the state of the required bit in the register.
- if the required bit is Low(0) it makes it High(1).
- if the required bit is High(1) it makes it Low(0).

Parameters

in	reg	this is register that needed to be changed.
in	bitNum	this is bit number that needed to be changed in the register.

Definition at line 50 of file BitMath.h.

3.11 Definition of data types

Typedefs

- typedef unsigned char uint8_t
- typedef signed char sint8_t
- typedef unsigned short int uint16_t
- typedef signed short int sint16_t
- typedef unsigned long int uint32_t
- typedef signed long int sint32_t
- typedef float float32_t
- typedef double float64_t
- typedef long double float128_t

3.11.1 Detailed Description

This file contains all the data types definitions that needed in this project.

30 Module Documentation

3.11.2 Typedef Documentation

3.11.2.1 float128_t

```
typedef long double float128_t
```

This is define a memory size of 16 byte float

Definition at line 23 of file dataTypes.h.

3.11.2.2 float32_t

```
typedef float float32_t
```

This is define a memory size of 4 byte float

Definition at line 21 of file dataTypes.h.

3.11.2.3 float64_t

```
typedef double float64_t
```

This is define a memory size of 8 byte float

Definition at line 22 of file dataTypes.h.

3.11.2.4 sint16_t

```
typedef signed short int sint16_t
```

This is define a memory size of 2 byte signed

Definition at line 18 of file dataTypes.h.

3.11.2.5 sint32_t

```
typedef signed long int sint32_t
```

This is define a memory size of 4 byte signed

Definition at line 20 of file dataTypes.h.

3.12 Service layer 31

3.11.2.6 sint8_t

```
typedef signed char sint8_t
```

This is define a memory size of 1 byte signed

Definition at line 16 of file dataTypes.h.

3.11.2.7 uint16_t

```
typedef unsigned short int uint16_t
```

This is define a memory size of 2 byte

Definition at line 17 of file dataTypes.h.

3.11.2.8 uint32_t

```
typedef unsigned long int uint32_t
```

This is define a memory size of 4 byte

Definition at line 19 of file dataTypes.h.

3.11.2.9 uint8_t

```
typedef unsigned char uint8_t
```

This is define a memory size of 1 byte

Definition at line 15 of file dataTypes.h.

3.12 Service layer

Modules

- MCU ports
- Bit math
- · Definition of data types
- MCU Registers

32 Module Documentation

3.12.1 Detailed Description

This layer contains all the common services that the other layers need like data types, MCU registers, bit math and MCU ports.

3.13 MCU Registers

Modules

- I/O registers
- · Interrupt registers

3.13.1 Detailed Description

This contains all the MCU registers definition and description for each register.

3.14 I/O registers

Modules

- Port A registers
- Port B registers
- · Port C registers
- · Port D registers

3.14.1 Detailed Description

This contains all I/O registers that controls the functionality of the MCU ports.

Note

x may be (A,B,C, or D) and n from 0 to 7.

- Each port pin consists of three register bits: DDxn, PORTxn, and PINxn. The DDxn bits are accessed at the DDRx I/O address, the PORTxn bits at the PORTx I/O address, and the PINxn bits at the PINx I/O address.
- The DDxn bit in the DDRx Register selects the direction of this pin. If DDxn is written logic one, Pxn is configured as an output pin. If DDxn is written logic zero, Pxn is configured as an input pin.
- If PORTxn is written logic one when the pin is configured as an input pin, the pull-up resistor is activated. To switch the pull-up resistor off, PORTxn has to be written logic zero or the pin has to be configured as an output pin. The port pins are tri-stated when a reset condition becomes active, even if no clocks are running. \arglf PORTxn is written logic one when the pin is configured as an output pin, the port pin is driven high (one). If PORTxn is written logic zero when the pin is configured as an out put pin, the port pin is driven low (zero).

3.15 Port A registers 33

3.15 Port A registers

Macros

```
    #define PORTA (*((volatile uint8_t*)0x3B))
        Output register for port A.

    #define DDRA (*((volatile uint8_t*)0x3A))
        Direction register for port A.

    #define PINA (*((volatile uint8_t*)0x39))
        Input register for port A.
```

3.15.1 Detailed Description

3.15.2 Macro Definition Documentation

3.15.2.1 DDRA

```
#define DDRA (*((volatile uint8_t*)0x3A))
```

Direction register for port A.

- This register controls the direction of the pin.
- Setting the bit in this register will make the pin output.
- · Clearing the bit in this register will make the pin input

Definition at line 68 of file RegisterFile.h.

3.15.2.2 PINA

```
#define PINA (*((volatile uint8_t*)0x39))
```

Input register for port A.

- This register stores the input values of port A.
- If the value is 1 then the applied voltage on this pin is high.
- If the value is 0 then the applied voltage on this pin is low.

Definition at line 76 of file RegisterFile.h.

34 Module Documentation

3.15.2.3 PORTA

```
#define PORTA (*((volatile uint8_t*)0x3B))
```

Output register for port A.

- This register controls the output of the pin.
- · Setting the bit in this register will make the pin high.
- · Clearing the bit in this register will make the pin low
- If the pin is configured as output through DDRx and we write high to PORTx register this will activate internal pull up resistor (x may be A,B,C or D).

Definition at line 60 of file RegisterFile.h.

3.16 Port B registers

Macros

```
#define PORTB (*((volatile uint8_t*)0x38))
```

Output register for port B.

#define DDRB (*((volatile uint8_t*)0x37))

Direction register for port B.

• #define PINB (*((volatile uint8_t*)0x36))

Input register for port A.

3.16.1 Detailed Description

3.16.2 Macro Definition Documentation

3.16.2.1 DDRB

```
#define DDRB (*((volatile uint8_t*)0x37))
```

Direction register for port B.

- This register controls the direction of the pin.
- · Setting the bit in this register will make the pin output.
- · Clearing the bit in this register will make the pin input

Definition at line 102 of file RegisterFile.h.

3.17 Port C registers 35

3.16.2.2 PINB

```
#define PINB (*((volatile uint8_t*)0x36))
```

Input register for port A.

- This register stores the input values of port B.
- If the value is 1 then the applied voltage on this pin is high.
- If the value is 0 then the applied voltage on this pin is low.

Definition at line 110 of file RegisterFile.h.

3.16.2.3 PORTB

```
#define PORTB (*((volatile uint8_t*)0x38))
```

Output register for port B.

- This register controls the output of the pin.
- · Setting the bit in this register will make the pin high.
- · Clearing the bit in this register will make the pin low
- If the pin is configured as output through DDRx and we write high to PORTx register this will activate internal pull up resistor (x may be A,B,C or D).

Definition at line 94 of file RegisterFile.h.

3.17 Port C registers

Macros

```
    #define PORTC (*((volatile uint8_t*)0x35))
```

Direction register for port C.

#define DDRC (*((volatile uint8_t*)0x34))

Direction register for port C.

• #define PINC (*((volatile uint8_t*)0x33))

Input register for port C.

3.17.1 Detailed Description

3.17.2 Macro Definition Documentation

36 Module Documentation

3.17.2.1 DDRC

```
#define DDRC (*((volatile uint8_t*)0x34))
```

Direction register for port C.

- This register controls the direction of the pin.
- Setting the bit in this register will make the pin output.
- · Clearing the bit in this register will make the pin input

Definition at line 133 of file RegisterFile.h.

3.17.2.2 PINC

```
#define PINC (*((volatile uint8_t*)0x33))
```

Input register for port C.

- This register stores the input values of port C.
- If the value is 1 then the applied voltage on this pin is high.
- If the value is 0 then the applied voltage on this pin is low.

Definition at line 141 of file RegisterFile.h.

3.17.2.3 PORTC

```
#define PORTC (*((volatile uint8_t*)0x35))
```

Direction register for port C.

- This register controls the direction of the pin.
- · Setting the bit in this register will make the pin output.
- · Clearing the bit in this register will make the pin input

Definition at line 125 of file RegisterFile.h.

3.18 Port D registers 37

3.18 Port D registers

Macros

```
    #define PORTD (*((volatile uint8_t*)0x32))
        Direction register for port D.

    #define DDRD (*((volatile uint8_t*)0x31))
        Direction register for port D.

    #define PIND (*((volatile uint8_t*)0x30))
        Input register for port D.
```

3.18.1 Detailed Description

3.18.2 Macro Definition Documentation

3.18.2.1 DDRD

```
#define DDRD (*((volatile uint8_t*)0x31))
```

Direction register for port D.

- This register controls the direction of the pin.
- Setting the bit in this register will make the pin output.
- · Clearing the bit in this register will make the pin input

Definition at line 164 of file RegisterFile.h.

3.18.2.2 PIND

```
#define PIND (*((volatile uint8_t*)0x30))
```

Input register for port D.

- · This register stores the input values of port D.
- If the value is 1 then the applied voltage on this pin is high.
- If the value is 0 then the applied voltage on this pin is low.

Definition at line 172 of file RegisterFile.h.

38 Module Documentation

3.18.2.3 PORTD

#define PORTD (*((volatile uint8_t*)0x32))

Direction register for port D.

- This register controls the direction of the pin.
- · Setting the bit in this register will make the pin output.
- · Clearing the bit in this register will make the pin input

Definition at line 156 of file RegisterFile.h.

3.19 Interrupt registers

Macros

- #define GICR (*((volatile uint8_t*)0x5B))
 - General Interrupt Control Register.
- #define GIFR (*((volatile uint8_t*)0x5A))

General Interrupt Flag Register.

- #define MCUCR (*((volatile uint8_t*)0x55))
 - MCU Control Register.
- #define MCUCSR (*((volatile uint8_t*)0x54))

MCU Control and Status Register.

3.19.1 Detailed Description

3.19.2 Macro Definition Documentation

3.19.2.1 GICR

#define GICR (*((volatile uint8_t*)0x5B))

General Interrupt Control Register.

Bit	7	6	5	4	3	2	1	0	_
	INT1	INT0	INT2	-	-	-	IVSEL	IVCE	GICR
Read/Write	R/W	R/W	R/W	R	R	R	R/W	R/W	-
Initial Value	0	0	0	0	0	0	0	0	

- Bit 7 INT1: External Interrupt Request 1 Enable
- Bit 6 INT0: External Interrupt Request 0 Enable
- Bit 5 INT2: External Interrupt Request 2 Enable

Definition at line 189 of file RegisterFile.h.

3.19.2.2 GIFR

#define GIFR (*((volatile uint8_t*)0x5A))

General Interrupt Flag Register.

Bit	7	6	5	4	3	2	1	0	_
	INTF1	INTF0	INTF2	-	-	-	-	-	GIFR
Read/Write	R/W	R/W	R/W	R	R	R	R	R	•
Initial Value	0	0	0	0	0	0	0	0	

• Bit 7 - INTF1: External Interrupt Flag 1

• Bit 6 - INTF0: External Interrupt Flag 0

• Bit 5 - INTF2: External Interrupt Flag 2

Definition at line 200 of file RegisterFile.h.

3.19.2.3 MCUCR

#define MCUCR (*((volatile uint8_t*)0x55))

MCU Control Register.

Bit	7	6	5	4	3	2	1	0	_
	SE	SM2	SM1	SM0	ISC11	ISC10	ISC01	ISC00	MCUCR
Read/Write	R/W	R/W	R/W	R/W	R/W	R/W	R/W	R/W	•
Initial Value	0	0	0	0	0	0	0	0	

- Bit 3, 2 ISC11, ISC10: Interrupt Sense Control 1 Bit 1 and Bit 0.
- Interrupt 0 and interrupt 1 Sense Control.

ISCx1	ISCx0	Description
0	0	The low level of INTx generates an interrupt request.
0	1	Any logical change on INTx generates an interrupt request.
1	0	The falling edge of INTx generates an interrupt request.
1	1	The rising edge of INTx generates an interrupt request.

Note

x may be 0 or 1.

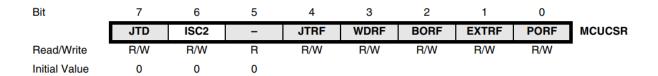

Definition at line 217 of file RegisterFile.h.

40 Module Documentation

3.19.2.4 MCUCSR

#define MCUCSR (*((volatile uint8_t*)0x54))

MCU Control and Status Register.

• Bit 6 - ISC2: Interrupt Sense Control 2

ISC2	Description
0	The falling edge on INT2 activates the interrupt request.
1	The rising edge on INT2 activates the interrupt request.

.

Definition at line 231 of file RegisterFile.h.

Functions

- EN_pinErro_t DIO_pinInit (EN_pinNum_t pinNum, EN_pinDirection_t pinDirection)

 Set the direction of the pin.
- EN_pinErro_t DIO_pinWrite (EN_pinNum_t pinNum, EN_pinState_t pinState)

 This function writes High or Low on the pin.
- EN_pinErro_t DIO_pinToggle (EN_pinNum_t pinNum)

This function toggles the state of the pin.

• EN_pinErro_t DIO_pinRead (EN_pinNum_t pinNum, EN_pinState_t *pinState)

This function reads the state of the pin.

Macros

External interrupts pins

- · These are the pins which connected to each interrupt.
- It should be configured as Input.

```
#define INT0_PIN (PD2 - PORTD_OFFSET)
#define INT1_PIN (PD3 - PORTD_OFFSET)
#define INT2_PIN (PB2 - PORTB_OFFSET)
```

INTO sense control

• These two bits ISC00 and ISC01 which located in MCUCR register control the INT0 sense control.

ISC01	ISC00	Description
0	0	The low level of INT0 generates an interrupt request.
0	1	Any logical change on INT0 generates an interrupt request.
1	0	The falling edge of INT0 generates an interrupt request.
1	1	The rising edge of INT0 generates an interrupt request.

.

- #define ISC00 0
- #define ISC01 1

INT1 sense control

• These two bits ISC10 and ISC11 which located in MCUCR register control the INT1 sense control.

ISC11	ISC10	Description
0	0	The low level of INT1 generates an interrupt request.
0	1	Any logical change on INT1 generates an interrupt request.
1	0	The falling edge of INT1 generates an interrupt request.
1	1	The rising edge of INT1 generates an interrupt request.

Generated by Doxygen

4.34 Ext interrupt.h 55

.

- #define ISC10 2
- #define ISC11 3

INT2 sense control

This bit ISC2 which located in MCUCSR register control the INT2 sense control.

ISC2	Description
0	The falling edge on INT2 activates the interrupt request.
1	The rising edge on INT2 activates the interrupt request.

.

• #define ISC2 6

Enumerations

enum EN_interruptNum_t { INT2 = 5 , INT0 , INT1 }

External interrupt number.

• enum EN_interruptSenseControl_t { LOW_LEVEL , ANY_LOGICAL_CHANGE , FALLING_EDGE , RISING_EDGE }

External interrupt sense control.

enum EN_interruptError_t { INT_OK , WRONG_INT_NUM , WRONG_SENSE_CONTROL }
 External interrupt errors.

Functions

EN_interruptError_t Ext_interruptInit (EN_interruptNum_t interruptNum, EN_interruptSenseControl_t interruptSenseControl)

External interrupt init.

4.34 Ext interrupt.h
